

ROYAL SOCIETY OF CHEMISTRY

Announcing an important **NEW** journal . . .

Mendeleev Communications

Preliminary Accounts of
Important New Work from
the USSR and Elsewhere

Joint Editors-in-Chief:

Academician O M Nefedov, Vice President, The Academy of Sciences of the USSR, Moscow

Professor H M Frey, University of Reading, UK

ISSN 0959-9436 Published 8 times per volume

EC and Rest of World £150.00 USA \$295.00

Mendeleev Communications is a prestigious new journal which will be launched in January 1991 as a collaborative venture between The Academy of Sciences of the USSR and The Royal Society of Chemistry. It will publish original papers directly in English, avoiding the delays inherent in the conventional communication channels. For the first time, the international chemical community will have rapid access to current Soviet chemical research.

Mendeleev Communications will contain preliminary accounts of novel and significant results of wide general appeal or exceptional specialist interest. It will cover all branches of chemistry and communications will appear within three months of their receipt in the UK Office. In format and range of subject matter the journal will closely resemble its 'sister' publication, the popular RSC journal **Chemical Communications**.

The content and presentation of **Mendeleev Communications** will both be of the highest quality. Two stages of rigorous international refereeing will ensure that only the very best submissions are accepted. Papers will be carefully and accurately translated into English before being edited in accordance with the traditional high standards of The Royal Society of Chemistry.

Mendeleev Communications will be essential reading, keeping the international chemical community in touch with the latest in chemical research from the USSR.

Find out more about this important new journal – for further information and a free sample copy, simply complete and return the slip below.

ROYAL SOCIETY OF CHEMISTRY

Announcing a **NEW** international journal . . .

Journal of Materials Chemistry

An interdisciplinary journal dealing with the synthesis, structures, properties and applications of materials, particularly those associated with advanced technology

Scientific Editor: Professor A. R. West, University of Aberdeen, UK

ISSN 0959-9428 Published Bimonthly (6 issues per annum)

1991 Subscription: EC £175.00 Overseas £195.00 US \$395.00

This **new** international journal, due to commence publication in 1991, represents an exciting and radical new publishing initiative on the part of the RSC. It breaks away from the traditional divisions of inorganic, organic and physical chemistry, by recognizing the interdisciplinary nature of materials research.

The **Journal of Materials Chemistry** will contain original research reports (both full-length papers and short communications), occasional review articles, book reviews, details of forthcoming conferences and a cumulative author index, together with colour photographs and diagrams where appropriate. It has an International Advisory Editorial Board consisting of some of the world's leading authorities on materials chemistry.

The areas to be covered in the **Journal of Materials Chemistry** include:

MATERIALS

Inorganics:

ceramics; layered materials; microporous solids and zeolites; silicates and synthetic minerals; biogenic minerals.

Organics:

organometallic precursors for thin films/ceramics; novel molecular solids and synthetic polymers with materials applications; polymer composites; biopolymers; biocompatible and biodegradable polymers; liquid crystals (both lyotropic and thermotropic); Langmuir-Blodgett films.

PROPERTIES AND APPLICATIONS

Electrical properties:

semi-, metallic and super-conductivity; ionic conductivity; mixed ionic/electronic conductivity; ferro-, pyro-, and piezo-electricity; electroceramics; dielectrics.

Optical properties:

luminescence, phosphorescence, laser action; non-linear optical effects; photoconductivity; photo- and electro-chromism, resists, glasses, amorphous semiconductors, optical modulation and switching.

Magnetic properties:

ferro, ferri- and antiferro-magnetism, spin glass behaviour, organic magnetism, magnetic bubbles and information storage.

Chemical properties:

ion exchange, molecular separation, catalytic action, sensor action, topochemical control of reactions.

Structural properties:

structural ceramics, refractories; hard materials; protective coatings; composites, adhesives; prosthetic applications.

Thermodynamic properties and phase behaviour

For further information and a sample issue of the **Journal of Materials Chemistry**, simply complete and return the slip below:
