## Antigen Analysis of *Mycobacterium tuberculosis* H37Rv Culture Filtrate Proteins

H. Målen, T. Søfteland, & H. G. Wiker

In the abstract, it is wrongly stated that “Rv3881c is located in the region of difference 1 (RD1) which is deleted from *Mycobacterium bovis* BCG, and is therefore a particularly promising candidate for development of serodiagnostic assays to detect active tuberculosis.”

The correct statement should read: “Rv 3881c is located close to the RD1 region and is also present in BCG”.

We apologize for this error.
